Title of invention: MULTIFUNCTIONAL COMBINED FRONT SEALING DOOR OF WASHING MACHINE

Abstract

The present invention relates to a multifunctional combined front sealing door of a washing machine that is configured as an auxiliary device for a case of a washing machine. The present invention includes a frame, a storage pocket and a door. The storage pocket is connected to the door and it is installed at the frame. According to the present invention, space utility inside the sealing door is improved. Powder detergent, a laundry brush and things like that can be stored and it is easy to maintain or repair the storage pocket. In addition, the storage pocket is easily separable and washable, which can largely reduce intensity of labor. According to the present invention, when opening and closing the sealing door, power applied to the sealing door is saved and the sealing door is opened and closed conveniently.
